

RAPID RECOVERY SERVICE

CLEAN.
DISINFECT.
DEODORIZE.

Destroy microbes and pollutants quickly and efficiently.

The importance of clean air cannot be overstated, especially during a pandemic. If you are preparing your building for tenant or employee reentry, reopening your business, performing scheduled maintenance or cleaning after a suspected positive case of infection, our Rapid Recovery indoor air quality treatment is a necessity. Use this service to quickly destroy mold, microbes and gases that can pollute your indoor air and cause illness.

Our service uses a Rapid Recovery unit made by RGF Environmental Group, Inc. RGF has been at the forefront of air, food and water purification since 1985. Major corporations and entities around the globe use its technology to ensure healthy air quality.

HOW IT WORKS

The Rapid Recovery unit uses RGF's proprietary Photohydroionization (PHI) technology. Light energy from the ultraviolet (UV) cell reacts with the air and a hydrated quad-metallic catalyst to create cleansing ions. These ions, such as hydroperoxides and super oxide ions, go from the system into the surrounding air to destroy microbes, mold and gases. Rapid Recovery has been thoroughly tested on airborne and surface bacteria and viruses, including MRSA, e-coli and Norwalk. It also suppresses microbe growth, reduces chemicals and eliminates odors. The odor absorbing media filter cartridge enhances the speed and efficacy of the system by filtering out gross particulate, such as smoke, while the advanced oxidizers treat the air in the space.

ALLERGY RELIEF

Drastically reduce particulate from allergens like pollen, mold spores, dander and dust.

SAFE FOR YOU, DEADLY FOR GERMS

PHI technology creates an advanced oxidation reaction that eliminates odors, viruses, bacteria and mold. The reaction is safe for people, pets and the environment; it creates "friendly oxidizers" that return to oxygen and hydrogen after destroying pathogens and leaves no residual chemicals. PHI technology has even been approved by the USDA-FDA-FSIS for food processing.

NOTICE THE DIFFERENCE

Our clients point out the remarkable difference in smell after using the Rapid Recovery service. Free from contaminants, your building is left with clean air. Rapid Recovery destroys odors from tobacco, diaper pails, chemical fumes, cleaning chemicals, cooking, mold, mildew, paint, pets, sewage, decaying organic matter and volatile organic compounds.
